How to read it: the front of this sheet is the table, colour coded by category. Here every tile is listed in the same order, with its number, symbol and full name. Commands in blue install the tool directly.

Don't stop at paper. The full interactive table is at ledlight33.github.io/periodic-table-of-dfir with live search, category filters and a tooltip on every tool. Source and updates on GitHub.

Use it at work freely: printing, sharing with your team, internal training and teaching need no permission. Only selling or bundling it into a paid product does.

"WHAT OUR EYES CAN SEE IS NOT THE MEASURE OF ALL THINGS."
